

Compactor Rolls

Our large capacity Mazak lathe is the perfect machine to rebuild compactor rolls. The live tooling function of the Mazak lathe enables us to utilize a single machine for the entire rebuild. As well, all hard-chroming is done in-house so DynaIndustrial controls every step of the production process. This ensures that our clients receive the highest quality product.

Customization:

- ▣ Whether the client requires a different type of bearing, profile, or roll diameter size, DynaIndustrial has the ability to meet each client's unique needs.

State of the Art Manufacturing:

- ▣ Our large capacity lathe allows for a complete compactor roll rebuild. Utilizing only one machine guarantees a high quality product.

Quality Controlled:

- ▣ All services; machining, welding, hard-chrome plating, complete disassembly/assembly and documented testing are performed in-house. This allows us to maintain quality control over the entire production process.
